

CISO as-a-service

Executive Security Leadership on Demand

Reduce Cyber risks | Address Non-Compliance | Respond to customer requirements

Your Challenges

- ? Are you in control of cyber risk? Due diligence, ownership, and effective management?
- ? Do you know the threats and vulnerabilities that provide the highest exposure to you today?
- ? How quickly can you detect, respond and recover from threats before data is compromised?
- ? Are your executives and senior managers aware of the legal, regulatory, and contractual requirements of security and privacy programs?
- ? Do you have the leadership to drive the adoption of information security across your organisation successfully?
- ? Do you have an adequate security program in place, with sufficient resources and budget to keep up with a rapidly changing threat landscape?
- ? Have you difficulties in finding and hiring a qualified individual that has the operational and technical experience to oversee your security strategy
- ? Are you adequately protected against third-party cyber risks?

What is CISO as-a-service

CISO as-a-service is a service designed to make top-tier security experts available to organisations who need security expertise and guidance but cannot afford or need a full-time CISO. It provides you with security intelligence in real-time to reduce the risk of negligence and liability resulting from a data breach, security flaws in your organisation's business or IT processes, or lack of security oversight in governance, risk, and compliance.

Benefits

- ✓ CISO as-a-service is more cost-effective where a fulltime role cannot be justified. Our flexible scale-up or scale-down service allows you to match your changing security requirements and threat landscape while making tangible cost savings.
- ✓ Reduce your risk by enhancing your cyber and information strategy with a clearly defined roadmap.
- ✓ As an external resource, we are unbiased and impartial, and able to report both positive and negative findings honestly and impartially.
- ✓ Our CISO-as-a-Service is designed to help organisations with all their security needs - as one person cannot have all required skills, you will have access to a pool of experienced, specialised, senior cybersecurity professionals.

DigiSôter CISO as-a-service offering

DigiSôter's CISO as a Service offering provides you with access to skilled resources for a fraction of the cost of hiring a full-time employee. The function can be built to match the organisation's requirements in terms of time dedicated and activities required. In addition to a dedicated resource, we provide the flexibility to access the full DigiSôter resource pool enabling delivery of a diverse range of services and knowledge, which typically cannot be provided by an individual CISO. DigiSôter can provide a CISO with technical hands-on experience, specialisation in legal requirements, regulation (such as GDPR, PCI DSS, etc.), and security standards (such as ISO 2700x, NIST, COBIT, etc.), or specialisation in secure software development life cycle (SSDLC).

We will provide independent and unbiased enterprise-wide security leadership and guidance to board members, executives and senior managers, and all employees.

The services include :

- Determining the level of acceptable risk and defining your security strategy and goals
- Build and deliver a cybersecurity plan and program
- Guide you through the annual security planning process, including defining security budgets that are aligned with business requirements
- Maintain core security operations
- Developing and implementing a 3rd party/vendor management program to ensure the security of the supply chain

Other services

- Identity theft and private data monitoring services for board members, executives and employees
- Pentesting as-a-service: deliver frequent automatic application and network penetration testing to identify new vulnerabilities sooner
- Vulnerability Management as-a-service: vulnerability scan and threat profiling supported by DigiSôter expert analysts
- Endpoint protection, detection and response services for workstations & servers
- IAM/IAG as-a-service: IAM, PAM, MFA, SSO fast implementation and smart analytics
- Third-party security-as-a-service: assess the maturity of third parties, identifying key risks and documenting prioritised recommendations to help manage or mitigate information, cyber or privacy risks
- Training, awareness sessions, phishing simulation, red team or incident response tabletop exercise
- DPO as-a-service: access to independent DPO expertise not available internally providing advice and guidance that helps you address the compliance demands of the GDPR and other Data Protection regulations on an ongoing basis
- CIO as-a-service: governance, PMO office, portfolio management, finance, sourcing, quality and control
- 2nd opinion: provide independent, trustworthy and professional advice and assistance to shed another light on the case or help to choose between different proposed solutions.

What makes DigiSôter different?

Our team of experts have decades of experience; building information security programs that work with business objectives and show measurable improvement to security posture. Our team of experts have decades of experience, building information security programs that work with business objectives and show measurable improvement to security posture. Throughout many projects, we have developed and are continually improving our methodology. This is our know-how and what distinguishes us from our competitors. Our team is made up of certified security professionals. It is essential for us to know our clients.
