

We are looking for a hands-on Cybersecurity & Infrastructure project manager

As a Cybersecurity & Infrastructure hands-on Project Manager, you will manage multiple medium to large IT projects, interact with many stakeholders to gather their requirements and follow the project from the kick-off to the delivery.

You can intervene in different environments and technical domains:

- Cyber-Security (vulnerability management, access management, network zoning, DLP, ISO27001, NIST, Risk management,...)
- Network LAN/WAN
- Storage
- Windows
- Unix/Linux
- Cloud (Azure, Office 365)

- Build the business case with the help of the project sponsors
- Define the benefits, scope, timing and budget of the project
- Deliver the project scope on time, on budget and with the expected quality
- Pro-actively identify and schedule project resources needs in strong collaboration with concerned team leaders
- Ensure quality of deliverables through a structured project management approach
- Continuously follow-up of risks and issues, including mitigation actions and escalations
- Collaborate with teams across various global divisions and entities
- Coordinate all parties involved in the project: both inside the organization and externally (for example IT suppliers)
- Maintain compliance with architecture principles and recommendations
- Hand over the finalized project to the operational teams
- Set-up proper governance bodies at all necessary levels

Your Experience

- You have a Master degree or equivalent by experience
- You have between 5 and 10 years of relevant experience as a Project Manager in IT projects as well a good overall technical expertise in a complex environment.
- You are proficient using a Project Management (Prince 2 or PMBOK) and Agile (Scrum) methodologies
- You have a cultural openness and adaptability, you are rigorous, customer-oriented, and you have high communications skills and analytical skills
- Strong understanding of ISO27000 standards, Data Protection, and Risk management
- Knowledge and experience in the various security domains (Identity Management, Access Control, Firewall, IDS/IPS, Log monitoring, SIEM, ...) is an asset
- You are fluent in French and English

Considered as a plus :

- ISO27001 Lead Implementer or lead Auditor
- CISM, CRISC, CISA, CISSP
- COBIT, ITIL
