To support the expansion of its consulting activities, DigiSôter is actively seeking a **Cyber Security Analyst**.

Our company

DigiSôter is a consulting firm specialised in risk management, information security and IT management.

DigiSôter is a diverse mix of talented people who have created a successful and rewarding place to work. We believe in what we do and in our ability to make a difference. Our emphasis on collaboration and intellectual autonomy encourages leadership throughout the organisation.

For more information, please visit: www.digisoter.com

The first mission of the Cybersecurity Analyst for one of DigiSôter's major clients will be to :

- Develop, write and implement Cybersecurity policies (employee acceptable use policies, ISO 27001 policies)
- Develop, implement & test an incident response plan, a business continuity plan and a disaster recovery plan.

For this first mission, the Cybersecurity Analyst will be coached by a DigiSôter partner.

Our values:

- We believe in people
- We are a team
- Simplicity and openness
- Simplicity above all
- Entrepreneurial spirit
- Continuous improvement
- Commitment to the customer

What we offer :

- The agility of a human-sized structure.
- A company that is at the forefront of cybersecurity services
- An environment that promotes the personal development of all employees and offers growth opportunities.

Required skills

- Autonomy, sense of initiative
- Customer and quality-oriented
- Interdisciplinarity and creativity, commitment from start to finish, concentration and perseverance
- Continuous desire to learn
- Team spirit, ability to listen and communicate

- University degree in computer science or equivalent combination of education and experience
- 3 to 5 years of hands-on experience as a security architect, a security analyst, or a similar role, dealing with multiple security domains (technologies, applications, services) and activities (concepts, policies, practices, procedures), preferably in a large organisation
- Experience with security risk assessment methodologies is much appreciated
- Ability to understand business products and processes to perform related security risk assessment
- Knowledge of ISO27001 or other frameworks (NIST, CIS Controls, COBIT, GDPR,...)
- Fluency in English is mandatory. French and/or Dutch is an asset.

This position is open to an employee or a freelancer.
